SUMMARY

GIS Analyst with 5 years of experience analyzing spatial data to create high-precision tax rate maps in collaborative team environments while managing multiple concurrent projects. Strong communication and problem-solving skills with a proven history of successful and efficient project deliveries. Skilled in JavaScript and Java as well as the React library and Spring framework. Aspiring junior developer eager to apply my professional and technical skills in a role where I can contribute to innovative software solutions and build meaningful, user-focused applications.

LANGUAGES | FRAMEWORKS | TOOLS

JavaScript, Java, HTML, CSS | React, SpringBoot | MySQL WorkBench

EXPERIENCE

Hit Record — LaunchCode Capstone Project

- Developed a front-end, single-page dynamic music review application with React and React Router for users to maintain a diary collection of their listening history
- Integrated Spotify's public API service to return search results based on user input
- Built back-end RESTful API with Spring Boot to support dynamic front-end interactions and full CRUD operations
- Created a relational database to store user registration credentials and associated review content
- Full Project Tech Stack: JavaScript, Java, HTML, CSS, React, Node.js, Spotify for Developers Web API, SpringBoot, MySQL Workbench

GIS Specialist — Taxography

June 2021 - Present

- Utilize GIS software to maintain data and topological integrity by analyzing mismatches between shapefile polygons at a fine-grained scale
- Analyze tax rate data for hundreds of counties spanning all 50 U.S. states and create high quality digital maps of county taxing districts using MapInfo Professional software
- Correspond weekly with data collection team to identify gaps in data, address issues, and communicate needs to ensure timely completion of all project campaigns
- Research county GIS data, including contacting county assessors as necessary to complete mapping projects in a timely and quality manner

GIS Specialist — Washington University in St. Louis

September 2020 - May 2021

- Utilized ArcMap online and desktop versions to diagram sustainability features on the Danforth and Medical Campuses, including charging stations and total tree coverage
- Recreated historical campus maps using aerial imagery, geospatial analysis tools and data records to track changes in the physical campus environment over time
- Created and managed public-facing story maps and web map applications to highlight campus sustainability efforts in an easily accessible format
